New Products

New From DVM!

OtiRinse® and OtiFoam®

OtiRinse® Ear Cleanser and Drying Solution

Ear Cleanser

Contains a Combination of DSS, Salicylic Acid, Lactic Acid and Benzoic Acid

Aloe Vera

Pleasant Fragrance

Available in Convenient 4oz Size for Dispensing

OtiFoam® Ear Cleanser

Ear cleanser with Foaming Action

Contains a Combination of Cocamidopropyl **Betaine** and Salicylic Acid

Eucalyptus

Pleasant Fragrance

Available in Convenient 4oz Size for Dispensing

New From Bio-Nutrition Laboratories, LLC (makers of ExClude)

PediaSorb SA™ Enteric

A Better Choice For Diarrhea and a New Alternative for **Rehydration**

Effective, even when the sodium pump is disabled

Less Costly, Less Hassle, Less Time-Consuming

Efficacy at Least Equivalent to IV Therapy

Faster **Rehydration** - Up To 50%!

Alleviates Symptoms of Inflammatory Bowel Disease

Available in a Case of 12 x 12.7gm Packets

Sold Exclusively Through Veterinary Distributors

Discussion: PediaSorb™ Enteric has demonstrated efficacy when used to rehydrate puppies afflicted with parvovirus and when used for symptomatic control of diarrhea caused by inflammatory bowel disease. It was developed to offer an alternative to cumbersome, costly and time-consuming IV **rehydration** techniques. The unique formulation of PediaSorb™ Enteric provides efficacy at least equivalent to intravenous fluid replacement, but with much faster **rehydration** -- up to 50% faster! Intestinal villi are damaged and the sodium pump is often disabled with enteric diseases. Traditional oral electrolytes that contain dextrose as their primary ingredient require healthy villi for absorption. That's why they are often not very effective and explains why veterinarians have preferred intravenous techniques for **rehydration**. PediaSorb™ Enteric contains several novel ingredients that provide a co-transport system for fluids and electrolytes even in the presence of severely damaged intestinal villi : L-glutamine is a plasma amino acid shown in many human studies to speed regenerative of damaged intestinal villi and to enhance absorption of electrolytes and fluids. Complex carbohydrates Maltodextrin and trace protein Hydrolysate provide the same absorption function of glucose but without the need for healthy villi. *The co-transport system results in a reversal of diarrhea*, instead of just replacing lost fluids as intravenous therapy does. The use of protein hydrolysates in PediaSorb™ Enteric are important

for several reasons: The smaller protein size (less than 1400 Daltons) means better absorption with more complete digestion. These proteins will not cause reactions in dogs or cats with food intolerance, a common condition in animals with inflammatory bowel disease. PediaSorb™ Enteric provides nutritional support for patients that are not eating.
